**SUGGESTED FEEDING CONCENTRATIONS PPM NITROGEN**

Jack's Professional® recommends these feed rates for the following crops. Remember to also consider plant stage, pot size, leaching fraction and environmental conditions when applying suggested rates. The quality of your water source will also affect overall feed rates, frequency and other additions in order to achieve optimum growth.

	Constant Liquid Feed (CLF)	Periodic (Every 7-10 days)
Plugs/Salt Sensitive	50-125	175-225
Woody Ornamentals	50-100	200-375
Bedding Plants	100-150	200-250
General Foliage	100-200	250-300
Cut Flowers	175-225	300-450
Garden/Landscape	200-300	400-750
Heavy Feeders Geranium, Mum, Lily, Poinsettia, Vegetable	200-300	350-400

**MIXING INSTRUCTIONS**

Chart displays the amount of dry fertilizer (oz.) to add to each gallon of water to make a concentrated solution. Please check your injector setting before use.

Desired N feed rate	Injector Setting		E.C. value (mmhos)
	1:15	1:200	
50 ppm	.68	4.50	.37
100 ppm	1.35	9.00	.74
200 ppm	2.70	18.00	1.48

Limit of Solubility = 3.5 lbs per gallon \*\*Exceeds maximum solubility

**Important Notes:**

E.C. value is the best method to determine fertilizer strength. Fertilizer appearance may vary in color due to variation in raw material size and tracer dye distribution upon the particles in the bag. In solution, color will remain consistent.

For best results, use warm water to dissolve product. Jack's fertilizers are made with 100% soluble raw materials that will form a true solution. Some raw materials are slower to dissolve than others. Keep stock tank covered to reduce light and debris inputs.
