

H.E. Anderson C O M P A N Y

WHERE LEGACY FUELS GROWTH

Since 1955, the H.E. Anderson Company has delivered reliable, precision chemical injection solutions for the horticultural industry.

Known for durable pumps and innovative systems, Anderson manufactures professional-grade water treatment equipment, including injection systems, controllers, and monitoring devices. Proudly made in the USA, every product is engineered for performance, efficiency, and long-lasting dependability.

J Pro <

Our JPro Ratio : Feeder® Injection System allows growers to feed their crops consistently and accurately over time

Features

- Offers positive displacement and volume proportioning
- Configurable for monitoring or control through EC and pH probe readings
- Engineered for minimal pressure loss
- All units are custom tailored to your specific flow rates and application requirements
- Low maintenance design for reliable long term performance
- Expandable system architecture to grow with your operation

**MADE IN
USA**

**TIME PROVEN
GROWER TESTED**

What makes H.E. Anderson unique?

- All units are assembled by hand in our shop in Muskogee, OK. Each system is designed with quality, longevity, and reliability in mind.
- Our ability to consult and technically support growers of all scales and crop types.
- We design and custom build all fertigation units based on your existing or upcoming facilities needs with scalability in consideration.
- Our pumpers give growers the capability to run any solution (sanitizers, acids, silica, organics, water soluble) with low maintenance, allowing less upkeep and more time to focus on operations.
- H.E. Anderson Company is a third generation owned and operated business.

All units are available fully pre-assembled for quick installation or as individual components for convenient on-site customer assembly

Serving growers across every crop category
