STORAGE CONDITIONS: Product can be stored in a
 cool, dry area (less than 140°F or 60°C) without loss of
 viability.

GENERAL INFORMATION

MycoApply® Ultrafine Endo is a suspendable powder mycorrhizal inoculant that can be sprayed onto bare roots, used as a root dip, drenched into porous soils, hydromulched, or blended into potting media. **The goal is to create physical contact between the inoculant and the growing roots.** Use higher rates for propagation or high-stress circumstances.

SOIL DRENCH:

Mix with water at a rate of 2.16 oz./ 5 gal (16.18g / 5 L). Mix well and keep agitated. Spray plant roots or dip roots prior to transplant, or water in as a soil drench (for porous soils only). 1 lb. of product treats ≈ 460 1-gal potted plants.

RESTORATION:

Use **7 to 10 lb/a (7.8 to 11.2 kg/ha)** for broadcast or hydromulch operations before or during the seeding operation.

NURSERIES AND GREENHOUSES:

Inoculum can be incorporated into growing media at a rate of **0.43 lb/yd³ (0.255 kg/m³)** for pots and containers. (For propagation media it is essential to have homogeneity of incorporation of the product. If that is not possible, consider doubling the incorporation rate to ensure a uniform application of active ingredients.)

FOR TURF:

Apply during installation or aerification. Use a rate of **0.67 to 1.62 oz/1,000 ft² (20 to 50 g/100 m²)**.

SEED COAT:

Use 0.7 to 1 lb/a (20 to 50 g/100 m²).

LANDSCAPE PLANT:

Drench the plant after it is planted, mix with back fill soil, or sprinkle product directly into the planting holes.
 Potted plants: **0.18 oz/plant (5 g/plant)**.
 Trees: **0.53 oz/in (5.92 g/cm)** of stem caliper.
